

Ken Thomson, University of Aberdeen, UK

PANEL A: AGRICULTURE (INCL. VET. SCIENCE)

The 'Exercise': General Observations

- Assessment of research (and development?), not teaching, advice, scholarship, etc.
- High scores only possible for “international” (or “global”) performance: very difficult!
- Agriculture is(?) “special”: national, cultural, environmental responsibilities
- Some (Agric./Vet.) submissions:
 - too detailed, e.g. many minor projects, and/or much “boilerplate”, i.e. standard copy/paste text
 - not enough KSPs (“key selling points”), i.e. research highlights

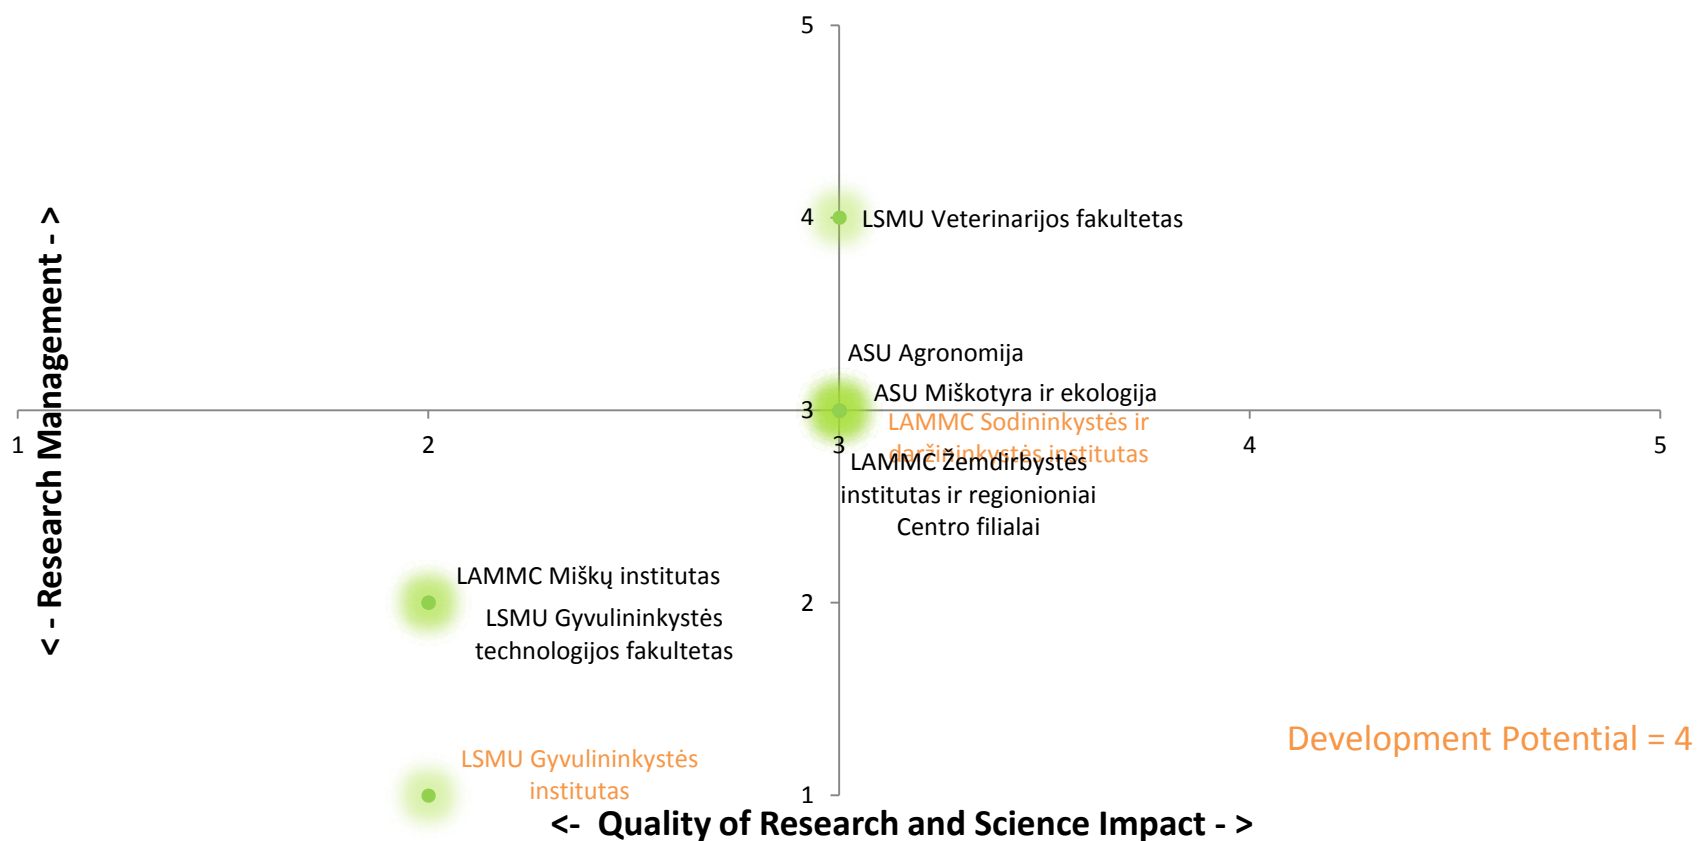

Average UoA Group Scores: All, Agriculture, Biomedicine

Agriculture (and Vet) Scores

- Overall, almost the same as all other UoA groups
- Relatively good scores for physical infrastructure and socio-economic impact
- Not so good scores for scientific impact (primarily measured by journal papers)
- With better submissions (= ideas!), scores for “development potential” might be higher
- University UoAs more “open” than non-University ones: perhaps due to other UoA duties, or to ...?
- Some UoAs appeared to have less than “critical mass” necessary for several scientific directions

Agriculture: Quality/Impact vs. Management (and Development Potential)

Final Remarks & Recommendations: I

- State funding for research: limited, but also rigid?
- Maximise socio-economic (i.e. “political”!) impacts, perhaps with social-science colleagues
- For “international” research quality, partnerships (maybe junior, but more than “links”) with foreign centres are essential; so:
 - Identify your KSPs (main attractions), scientific and/or “regional”
 - Approach possible partnership leaders with specific proposals

Final Remarks & Recommendations: II

- Identify and approach your (few) most promising partners:
 - possibly Latvia and Estonia (but why?)
 - other Baltic countries for “regional” issues
 - other EU for Horizon2020 (and “eastern”?) issues
 - “global” partners: USA/Canada, Russia, etc.
- Put less effort into scientific publications in Lithuanian language, more into ones in English
- Some excellent facilities; now use them!
- *"Strengthen your strengths"*

Final Remarks & Recommendations: III

for future research assessments:

- Limit text (section) lengths
- Request highlights (not every item)
- Request specification (e.g. by examples?) of:
 - “management” features (types)
 - “impacts” (scientific, social, economic)
 - “development” ideas

Thanks to my Panel colleagues!
Thankyou for your attention!
Good luck in the future!

OUR EVIDENCE – YOUR DECISIONS

Average Scores

Group	Performance and Impact	Management	Development potential	Economic and social impact	Physical infrastructure	Overall score
All UoAs	2.72	2.58	2.85	2.98	2.98	2.71
Agriculture	2.63	2.63	3.00	3.13	3.25	2.63
B1&B2	3.23	2.82	3.23	3.14	3.09	3.00
B1	3.00	2.67	3.17	3.50	3.50	3.17
B2	3.31	2.88	3.25	3.00	2.94	2.94
